PROFESSIONAL EXPERIENCES

Boston University SPARK! *Boston, MA | Sep 2026 – Present*

Technical Project Manager

- Lead a student team from initial scoping to execution **to build a Python-based spatial ETL pipeline** (pandas, regex, geopandas) for the **Boston Public Library**, facilitating client meetings to align deliverables while driving code quality through direct PR reviews.
- Guide student engineers from concept to prototype in a**rchitecting an automated XML data-cleaning pipeline and Neo4j Graph RAG application** for **Humanitarian AI Today**, acting as the primary technical liaison and providing hands-on code mentoring.

Executive Office of Technology Services and Security, Commonwealth of Massachusetts *Boston, MA | Jun 2026 – Aug 2026*

Experience Design and Research Intern

- Mapped MyMassGov user journeys against telemetry logs to identify instrumentation gaps, **delivering technical recommendations** for identifier integration, event-logging configurations, and the addition of regional and accessibility data.
- **Authored comprehensive Data Quality Guidelines**, empowering cross-functional teams to **perform independent quantitative analysis** via accessible toolkits featuring examples, practical checklists, and common pitfalls for data integrity.
- Supported the **Experience Measurement** initiative by **drafting standardized evaluation templates and metrics** across multiple teams.

Samsung Electronics *Suwon, South Korea | Mar 2023 - Apr 2025*

Product Manager, CX Office, Mobile eXperience Division

- Aligned hardware, software, and UX teams **to define technical requirements for satellite messaging**, ensuring feasibility for **a $165M satellite messaging market opportunity.**
- **Designed localized UX flows** by integrating requirements from global carriers, maintaining **global design consistency.**
- Managed global QA workflows to **resolve launch-critical bugs** and **analyzed 5K+ user feedback** entries to prioritize the roadmap.
- Partnered with the Big Data Center **to analyze massive telemetry data for new feature ideation** using SQL, and **built a Superset dashboard** with engineers **to enable daily metric tracking** across cross-functional teams.

VoyagerX *Seoul, South Korea | Mar 2021 - Jan 2022*

Product Manager Intern

- Established data-driven syncs to **break down internal silos** and **align cross-functional product strategy**.
- **Prioritized sprint backlog and led agile delivery** for 'Translate Captions' by **analyzing user workflow friction** and conducting 30+ iterative usability tests, driving 6% feature adoption and 3%p total user growth.

EDUCATION

Boston University, Faculty of Computing and Data Science *Boston, MA, United States | Sep 2025 - Dec 2026*

Master of Science in Data Science GPA: 3.86 / 4.0

- Relevant Study Areas: Human-Computer Interaction, Large Language Models, Computational Statistics, Business Analytics.

Seoul National University *Seoul, South Korea | Mar 2018 - Feb 2023*

Bachelor of Science in Computational Sciences | Bachelor of Arts in Religious Studies GPA: 3.88 / 4.3

- Awards and Honors: Outstanding Peer Tutor - Korean Language(2020); Korea Foundation of Advanced Skills Scholarship(2020)

PROJECTS

TACT: Touch-Free Acoustic Control Triggers for LLMs *Jan 2026 - May 2026*

- Engineered a**n end-to-end multi-modal LLM framework**, integrating audio frameworks with LLM APIs to translate unstructured acoustic triggers (knocks, claps) into actionable AI system commands.
- **Investigated AI execution failure modes and latency constraints** in edge-case environments, **directly iterating on prompt logic and system rules to ensure reliable hands-free operation** without human-in-the-loop dependencies.

Data Days for Good: Analysis of Youth-SRO Conflicts (Collaboration with CfJJ & MassMutual) *Mar 2026*

- **Synthesized and standardized** highly irregular School Resource Officer (SRO) incident logs and complaint narratives using Python, **processing messy text data to map distinct district-level risk profiles** and visualize geographic trends for stakeholders.
- Audited youth-involved incident records obtained via public records request and **identified critical PII redaction failures**.

SKILLS

Python(pandas, PyTorch), SQL, Power BI, Tableau, BigQuery, Google Analytics, Google Cloud Platform, Jira, Git, AI-assisted prototyping, Prompt Engineering, Technical Documentation, AI Decision Support, Sprint Management, Figma, Miro.
